

## Migration Numbers: Unauthorized entries. Undocumented aliens. Legal residents

An emotional summary: It is straightforward. The yearly unauthorized entries at the border are about 1/2 a million. Meanwhile, about a million people overstay their authorized entry into the US. Another 1/2 a million people become legal residents in the US because of family ties. The number of “encounters” last year was 2 and a half million, but encounters are not unauthorized entries into the country! No one talks about Spanish tourists being a problem, one of the worst groups overstaying their visas, or the many US citizens' family members who become legal residents too easily. But there is an outcry about the inflated number of poor brown people risking their lives to cross the desert to sustain the American economy. Why? Because disinformation about a border invasion creates fear and uncertainty and ultimately votes for anyone promising to fix the non-existing problem.

The following is a summary of data available from Homeland Security.

The total number of unauthorized entries in the Southwest border can be estimated between a quarter and a half million, a far cry from the approximately two and a half million reported encounters! The number of visitors overstaying their authorized entry to the US is significantly higher at about one million.

Encounters include apprehensions, inadmissibles, and expulsions. Nationwide encounters are, as of July 2024, about 170 thousand a month, their lowest post-pandemic level. Border encounters are often confused with “border crossings,” “border arrests,” “illegal entries,” or a myriad of other terms.

The number of undocumented aliens living in the United States has hovered around 11 million for the last several years.

The estimated legally resident population is about 30 million or nearly three foreign-born legal residents in the US for each undocumented foreigner.

About one million migrants become US residents legally (half through family ties) each year.

Details follow:

### 1. Unauthorized Entries

Unauthorized entries cannot be measured directly because they are those who get into the country avoiding detection. No detection, no measurement, therefore they can only be estimated. The US government has not published estimates of the number of unauthorized entries since 2021 because of the limitation in measuring them. The current information released to the public is the number of “Nationwide Encounters” by US Customs and Border Protection (CBP). Encounters include apprehensions, inadmissibles, and expulsions.

See <https://www.cbp.gov/newsroom/stats/nationwide-encounters>

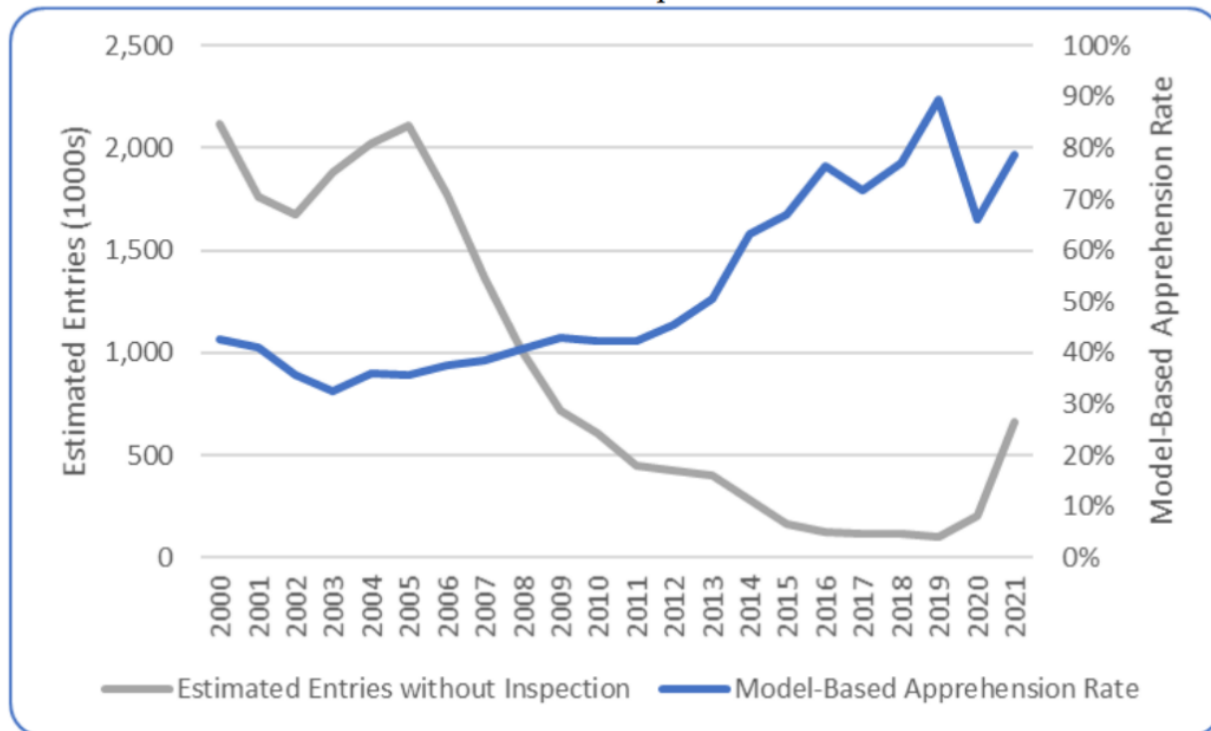

Border encounters are often confused, unintentionally or as disinformation, with “border crossings,” “border arrests,” “illegal entries,” or a myriad of other terms. Border arrests are a small fraction of border encounters. Lacking the proper visa to enter the US and consequent denial of entry is a more frequent border encounter, for example. Here’s an example of misinformation (wrong information without intending harm): ProPublica’s report from June 10, 2024, “What’s Next for U.S. Immigration Policy on the Southern Border?” which states, “border apprehensions or encounters” confounding encounters with arrests! It further says, “it’s estimated that there is going to be between 1.6 to 1.7 million arrests. The high-water mark was 1.6 million in 2000 for the longest time. When the numbers went up in 2022 and 2023 to 2.2 million.” <https://www.propublica.org/article/us-immigration-policy-2024-mexico> The number of arrests has never been in the millions!

President Biden said, in his National Convention speech on August 19, 2024: “As a result of the executive action I took, border encounters have dropped over 50%. In fact, there are fewer border crossings today than when Donald Trump left office.” Not necessarily misinformation, but confounding “border encounters” with “border crossings.”

Border encounters go up if the percentage of unauthorized entries goes down! The better at stopping unauthorized entries, the higher the number of border encounters. The apprehension rate is estimated to be currently 80 to 90% while it was about 40% in the period 2000-2010 according to the Department of Homeland Security. See [https://www.dhs.gov/sites/default/files/2022-09/2022\\_0818\\_plcy\\_southwest\\_border\\_enforcement\\_report\\_fy\\_2021.pdf](https://www.dhs.gov/sites/default/files/2022-09/2022_0818_plcy_southwest_border_enforcement_report_fy_2021.pdf)

The estimated unauthorized entries according to the above report dropped steadily from 1 million starting in 2008, after being as high as over 2 million in 2000 and 2005, as follows:

Estimated Southwest Border Entries without Inspection: FY 2000–FY 2021

CPB has made clear that repeat encounters have inflated the number of encounters significantly, as follows: “The number of total encounters overstates the number of unique people attempting to cross the border. Prior to the pandemic, about one in eight border encounters involved a person previously encountered during the prior year. However, since CBP began expelling noncitizens under the CDC’s Title 42 public health order to limit the spread of COVID-19, the repeat encounter rate jumped to more than one in three encounters, including almost half of single adult encounters. Thus, while total enforcement encounters increased 82 percent between 2019 (the last pre-pandemic year) and 2021, the number of unique individuals encountered at the border increased 30 percent.” From <https://www.cbp.gov/newsroom/national-media-release/cbp-releases-operational-fiscal-year-2021-statistics>

The Southwest border encounters reached a total of “2,475,669 Enforcement Encounters” or approximately 2 ½ million in 2023. Assuming an apprehension rate of 80%, the number of unauthorized entries would have been about half a million. Considering the influence of repeat encounters, the apprehension rate could be estimated at 90% reducing the number of unauthorized entries to about a quarter of a million. **The total number of unauthorized entries in the Southwest border can therefore be estimated between a quarter and half million, a far cry from the approximately two and half million encounters!** **The number of visitors overstaying their authorized entry to the US is significantly higher at about one million.** Undocumented aliens are more likely to be foreigners who overstay their visas rather than people who enter the country undetected. Two to one!!

According to DHS: “As noted, CBP determined there were 23,243,127 in-scope nonimmigrant admissions to the United States through air or sea POEs with expected departures occurring in FY 2022, which represents the majority of air and sea annual nonimmigrant admissions. Of this number, CBP calculated a total overstay rate of 3.67 percent, or 853,955 overstay events.” See [https://www.dhs.gov/sites/default/files/2023-07/23\\_0707\\_FY22\\_FY23\\_CBP\\_Integrated\\_Entry\\_Exit\\_Overstay\\_Report.pdf](https://www.dhs.gov/sites/default/files/2023-07/23_0707_FY22_FY23_CBP_Integrated_Entry_Exit_Overstay_Report.pdf)

Nationwide encounters are, as of July 2024, about 170 thousand a month, their lowest post-pandemic level.

FY14	41,828	38,685	36,695	35,181	42,399	57,405	59,119	68,804	66,541	48,819	39,758	34,003	569,237

## 2. Undocumented Aliens living in the United States

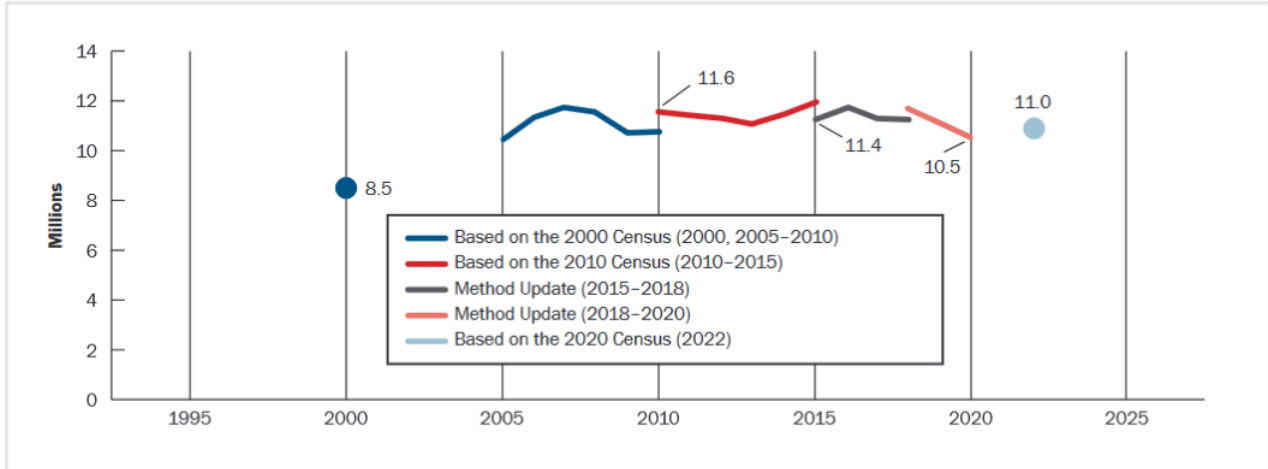

Homeland Security publishes estimates of the number of undocumented aliens living in the United States. Remarkably, the number has hovered around 11 million for the last several years. California and Texas account for about 5 million or almost half of this population.

The population of undocumented aliens has steadily aged over the last few years. Most likely due to some people having remained in the country undocumented for many years, while fewer younger people have entered the country without authorization.
